

AI Customer Capture System

Product Showcase — Executive Summary

The Problem

Small service businesses — contractors, salons, plumbers, barbers — miss calls constantly while working with customers. When a call goes unanswered, most potential customers move on to the next option. There is no follow-up, no lead capture, and no second chance. That missed call is lost revenue.

The Solution

The AI Customer Capture System is a four-automation workflow built on Zapier, Quo (business phone), ChatGPT, and Google Sheets. It runs 24/7 with no manual input required — capturing, qualifying, logging, and following up on every lead automatically.

What the System Does

01

Missed Call Auto-Response

When a call is missed, an immediate text fires to the potential customer — so they know the business will get back to them instead of going silent.

02

AI-Powered Text Response

When a customer texts back, ChatGPT reads the message and sends a personalized reply based on the business's services, pricing, and availability. Not a template — a real answer.

03

Lead Logging + Owner Notification

Every contact is automatically saved to Google Sheets with their info and timestamp. The owner is notified instantly so nothing falls through.

04

Google Review Request

After a completed job and payment, the system automatically sends a review request with a direct link — building reputation without the owner having to remember to ask.

Simple, Transparent Pricing

\$299

One-time setup

Monthly includes monitoring, updates, AI tuning, and technical support.

\$59

Per month

Why It Works

Most small businesses are already losing leads they know exist. This system recovers them automatically — without adding to the owner's workload.

Built for: Plumbers · HVAC · Electricians · Roofers · Barbers · Dentists · Auto Detailers · Any Service Business

This is a product showcase. Live client results will be documented upon pilot deployment. Full written case study and slide deck available upon request.
